Initial Post-Acute Care Placement (2016)

T LAN SUMMIT Health Care Payment Learning & Action Network

42 CFR 482.43 Condition of Participation: Discharge Planning

The hospital must identify at an early stage of hospitalization all patients who are likely to suffer adverse health consequences upon discharge if there is no adequate discharge planning

The discharge planning evaluation must include an evaluation of the likelihood of a patient needing post-hospital services and of the availability of the services

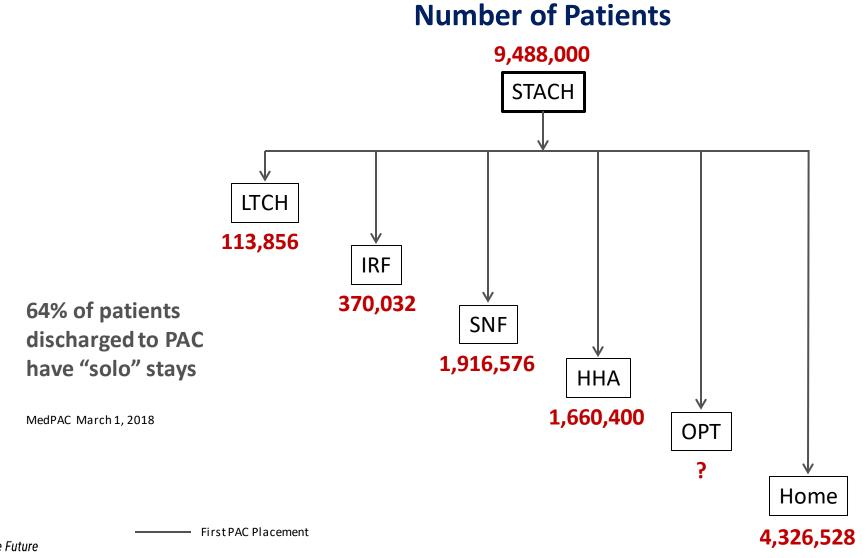

The discharge planning evaluation must include an evaluation of the likelihood of a patient's capacity for self-care or of the possibility of the patient being cared for in the environment from which he or she entered the hospital

The hospital personnel must complete the evaluation on a timely basis so that appropriate arrangements for posthospital care are made before discharge, and to avoid unnecessary delays in discharge

The hospital must arrange for the initial implementation of the patient's discharge plan

"Financial Success" in APMs is defined by "Savings"

(reduction in Medicare Part A & B payments)

- Physician Services (PFS)
- Short-term Acute Care Hospital (STACH)
- Inpatient Hospital Readmissions
- Critical Access Hospitals (CAH)
- Long-term Acute Care Hospitals (LTCH)
- Inpatient Rehabilitation Hospitals (IRF)
- Skilled Nursing Facilities (SNF)
- Home Health Agencies (HHA)
- Outpatient Rehabilitation Therapy
- Hospital-Based Outpatient Services (HOPD)
- Inpatient Psychiatric Facilities (IPF)
- Clinical Laboratory
- Imaging
- Durable Medical Equipment (DME)
- Part B Drugs and Biologicals

lealth Care Payment Learning & Action Network

Post-Acute Care "The Low Hanging Fruit"

- assign care coordinators/navigators to the sickest patients
- extend the stay in the STACH for additional days
- discharge patients to the lowest level of care that can safely meet their clinical needs (i.e. improve 1st PAC placement)
- establish narrow networks of preferred post-acute care partners
- reduce unnecessary services (reduce the overuse the ultra-high RUGs levels)
- reduce LOS in post-acute settings (primarily SNFs)
- limit the use of the relatively higher cost IRF and LTCH settings
- address underlying issues needed to reduce PAC readmissions to STACHs

V

Tweet

David Grabowski @DavidCGrabowski

Post-acute care is the ATM of value-based health care: everyone is trying to take money out of PAC. In a new @HSR_HRET paper,

David C. Grabowski, PhD, is a professor of health care policy in the Department of Health Care Policy at Harvard Medical School and is also a member of the Medicare Payment Advisory Commission (MedPAC).

What Next?

- patient/family-caregiver involvement in collaborative decision making
- patient advisory councils
- continuous care navigation and health coaching interactions
- 90-day seamless episode-based clinical care paths
- redesigned process and tools used for care transitions
- engaged PAC providers seeking new ways to optimize the care delivery sequence, process and site of service more rational use of PAC
- potentially... non-traditional uses of the IRF and LTCH settings
- even greater use of both home health and home chore services
- involvement of community-based services where available (transportation, food, social services)

Long-Term Services and Supports

G. Lawrence Atkins, Ph.D. Long-Term Quality Alliance

> LAN Summit October 22, 2018

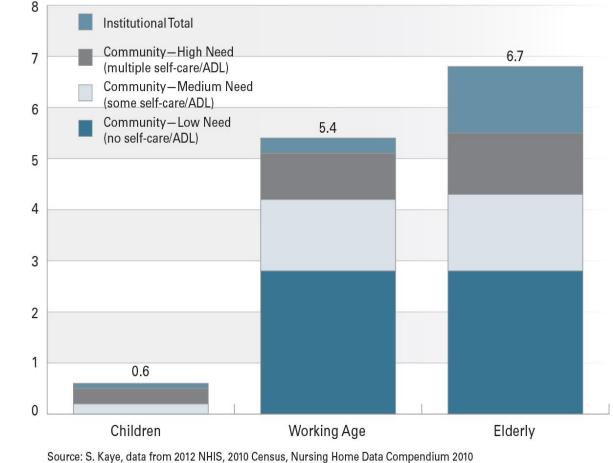

Long-Term Services and Supports (LTSS)

- Provided to people with "functional limitations" who need assistance to take care of themselves – to perform basic "activities of daily living" (ADLs).
- Caused by physical, developmental, cognitive, mental health or chronic health condition expected to last for an extended period of time (e.g., 90 days +).
- Provided in institutional (nursing home, ICF, mental hospital) or home- or community-based (ALF, group home, adult day center, or home) setting.
- Services include: personal care assistance, assistive technologies, medication management, home modification, care coordination, housing assistance, employment assistance, meals, transportation.

Need for LTSS Today

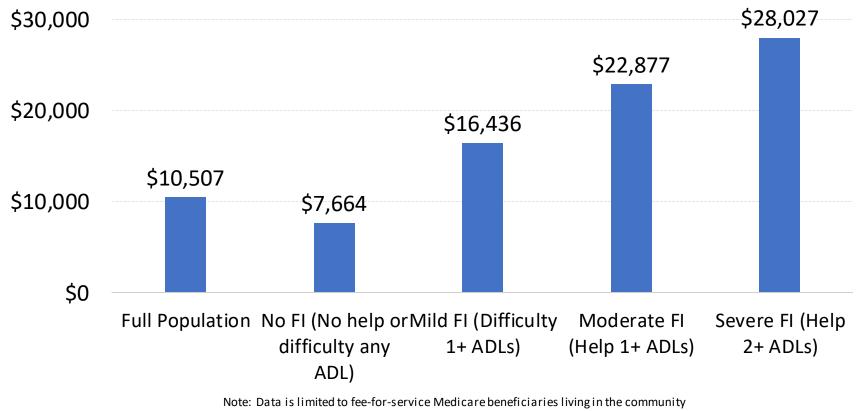

- More than 70 million Americans have some activity limitation
- Over 12 million adults (18+) in need of LTSS today
- More than half (55%) age 65 plus – almost half (45%) age 18-64.

Population Needing LTSS, by Age Group and Level of Need (Millions)

Movement of States to Medicaid Managed LTSS (MLTSS)

11 Million <u>Dual Eligible</u> Beneficiaries are Covered by Both Medicare and Medicaid (2013)

• SOURCE: MEDPAC. Beneficiaries Dually Eligible for Medicare and Medicaid. Data Book. January 2018

Enrollment of Dual Beneficiaries in Integrated Plans

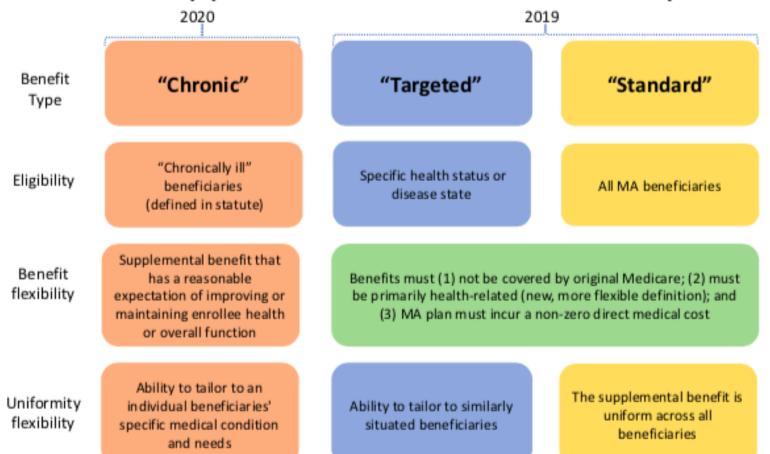

Aligned D-**SNP/MLTSS** 2% **Unaligned D-SNP** 19% FIDE-SNP 4% MMP 5% PACE 1%

12 % of all Full Dual Beneficiaries are enrolled in integrated plans

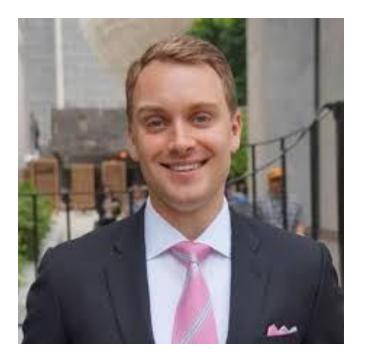

Initiatives to Advance LTSS Integration

- Financial Alignment Demonstration ACA
 - 13 States involved in the Demonstration began 2013
 - Capitated model MMPs- 3 way contract between CMS-State-MCO (11 states) – enrolled 375,000 by December 2016.
- CHRONIC Care Act of 2018
 - Made D-SNPs permanent
 - Encouraged states toward full integrated models (FIDE-SNPs)
 - Created new Medicare Advantage supplemental benefit for non-medical services.

Supplemental Benefits Flexibility
